ORDISOFTWARE

AGILE ENGINEERING

WEBSITES

PROGRAMS

CONSULTING

COMPUTER SERVICES

CONSULTING

Study of an achievement, an improvement or resolution of an issue.

COACHING

Project management with selection, planning and achievement of technical solutions.

WEBMASTERING

Development and maintenance of websites.

ANALYSIS

Specification of modules to design within a domain.

DESIGN

Recognition of system information's items and choice of implementation.

IMPLEMENTATION

Writing software components defined by the specifications.

TESTING QUALITY

Code audit with validation of the user interaction and the software quality.

DEPLOYMENT

Installation and setup of the software.

MAINTENANCE

Correction of dysfunctions and minor improvements.

MIGRATION

Relocation from an obsolete system to a new infrastructure.

SOFTWARE CREATION

Appeal to the services of a specialist and expert in computers, in object development and in software quality to carry out your projects.

Partner of your success, Ordisoftware develops your application mainly in C#.NET with Visual Studio, in Object Pascal with Delphi, and in ASP.NET and PHP for Web modules, with mySQL, SQLite, Access, SQL Server and Oracle databases.

Know-how, skills and experience are at your service to achieve your goals and to conceive or improve your Windows, Web or DotNet solution, whether you are a private individual, an artist, an association, a merchant, an artisan, a company, an administration, a school, a solo professional or a group.

⇨ **WEBSITES DESIGN**

Realization of the user-friendly internet site adapted to your requirements.

⇨ **SOFTWARE PROGRAMMING**

Development of the ergonomic software for reaching your objectives.

⇨ **CONSULTING AND COACHING**

Help to create your websites and your programs.

WEBSITES

Internet is a marvelous communication tool whose multiple possibilities, such as online sales processes, are unavoidable and allow:

⇨ Developing your interests, your domains of intervention and your offers in order that your partners and visitors are encouraged to learn about your business and to contact you.

⇨ Selling your services and products using secure online payments and a virtual shop.

The integration of components provides the necessary interactivity and attractiveness: blogs and news managers, galleries and media players, forums and online surveys, collaborative work and time management, community portals, etc.

Pages are created based on your digital documents and their design corresponds typically to a fitting of your contents on an A4 format, whatever the size of items, paragraphs and screens.

PROGRAMS

Computer software automates and develops many activities, while making them easier and more pleasant to perform:

⇨ These are tools that allow to increase relational impact, to improve professional gains, as well as to provide more time while bringing more diversity and pleasure to live the daily life.

⇨ The ergonomic of graphic interfaces is thought to combine the ease of the use, the clarity of the presentation and the esthetic of the overall result, in order to carry out the objectives with the best performances and to provide an optimal administration.

The phases of your data-processing project take place in four successive and retroactive steps that are imbricated one inside the other:

- ✓ The analysis defines "what to do".
- ✓ The design defines "how".
- ✓ Development is writing the code.
- ✓ The quality tests are a general audit.

When there is no longer any step to perform, no action to be taken, that everything works smoothly and that the desired result is reached, the software is considered as finished and it is ready for deployment.

CONSULTING

Intervention in consulting and coaching, mainly as a technician, can be done during each phase of your IT project:

⇨ The consulting and the study allow to get a technical evaluation of your activity and your organization for proposing to you the actions to undertake, or the elements to modify, within your present or future system in order to make your work optimal.

⇨ The coaching and the project management provide an adequate management within your teams of the whole interventions to be made for realizing your goals.

Through targeted automation and adapted consideration of the interaction of flows and processings within your activity, a simple, effective and efficient software solution can be implemented in autonomous, client-server, Intranet and Internet architectures.

TECHNICAL SKILLS

Operating systems

- Windows
- UNIX-like
- MS-DOS
- Atari ST TOS
- Thomson TOx

Development tools

- Microsoft Visual Studio
- Borland IDEs & Delphi
- WordPress
- NuSphere PhpED
- Namo WebEditor
- Microsoft Word
- Axialis IconWorkshop
- GIMP & XnView

Programming languages

- C#
- C++
- C
- Object Pascal
- Pascal
- SQL
- PHP
- HTML
- Assembly
- Basic
- Logo

Frameworks

- Microsoft .NET
  Forms, Linq, ADO.NET
- Borland VCL
- API Win32
- API X11
- C Standard Library
- x86 Interrupts
- Thomson Basic 512

Project management

- ZenHub
- Kanban
- Unified Process
- Rapid Application Development
- Extreme Programming
- Waterfall Model

Modeling architectures

- Unified Modeling Language
- Entity-Relationship Model
- Flowchart
- Software Ideas Modeler
- Power AMC Designer
- Paper and Pencil

Implementation techniques

- UI/UX Design & Ergonomics
- Components & Frameworks
- Multitasking & Multithreading
- Client-Server & Multitier
- COM & DCOM
- Abstraction & Encapsulation
- Structured Programming
- Polymorphic Programming
- Generic Programming
- Code Refactoring
- Unit Testing

Databases

- Git & GitHub (TortoiseGit)
- SQL Server
- SQLite
- mySQL
- Dbase
- Access
- Oracle
- Interbase
- Paradox

WEBSITES [1]

WordPress setup	from 50 €
Personalized website or CMS [2]	from 250 €
Additional page	about 25 to 50 €

PROGRAMS [1]

Hourly rate	75 €
Daily rate	600 €
Libre software [3]	from 2000 €

CONSULTING [1]

Hourly rate	75 €
Daily rate	600 €

(1) The existing rates and conditions of sale are available on the website of the provider.
(2) Creation of the site structure with home, presentation, legal information and contact pages.
(3) Generic utility and management software under libre or open source license.
